<b>Program: INDUSTRIAL AND MANAGEMENT ENGINEERING</b>			
<b>Description:</b> Industrial Engineering encompasses activities in quality, production, operations research, simulation, facilities layout, work system design, work measurement, safety and ergonomics, economic and cost analysis. An industrial engineer acquires the capacity to design, develop, implement, and improve integrated systems that include people, materials, information, equipment, technology and energy. It applies knowledge from mathematics, science, computers, accounting, algorithms and graphics to solve problems involving efficiency, effectiveness or productivity. In terms of Management, a graduate of this program develops an understanding of the engineering relationships between the management tasks of planning, organizing, leading, controlling, and the human element in production and service organizations. Essential professional skills, such as communication, teamwork and interpersonal relations are practiced throughout this program.
